

RE: Street Light LED Upgrade Project

A comprehensive audit and illumination study was undertaken to assess the light output of every street light that will be replaced with a LED light. Each LED street light will have the same light output as the light that is being replaced.

However, the new lights may appear to be brighter, as LED lights provide a cleaner light with higher color rendering. This improvement benefits our community by making it easier to see at night, helping to make the townships streets safer and more secure. Communities that have upgraded to LED street lights are very satisfied with the upgrade.

Over the next several months crews from Greentech Energy will be installing the lights street by street beginning in the 2nd Ward. It is anticipated that the project will be completed by the end of September.
